

CAPACITIVE TOUCH PADS

HIIRI.NT.MU.USB
EASY CAT

- Switches and keyboards
- Works under plastic and glass plate
- Standard and customized products

PRODUCT DESCRIPTION

Cirque capacitive contact levels are available as simple levels with a capacitive level and control electronics. This concept is often used in customized solutions where the touchpad is integrated into the customer's enclosure, panel or even invisible under the panel. Touchpads are also available in their own enclosure (the so-called flat panel), where the connection surface is a USB, PS2, serial port interface or even a WLAN controlled object. Capacitive touch pads enable a variety of hard-wearing, dust and dirt-proof keys, slide switches and flat mice, among other things.
